[Date]

Dear hiring team,

I am writing to apply for the [Role] position. I am a full stack developer with a backend focus, coming from six years in 3D, looking for a team where I can keep growing in Java and Node.

I build REST APIs in Java 17 (Spring Boot) and Node.js (Express) over relational databases, with automated tests, and connect them with Vue 3 SPAs. My latest project, sideForge, is a 42-endpoint API over 6 entities, with 112 tests and 81% coverage; at CreandoMientras I led the public site and the self-service admin panel of a handmade business, from design to deployment, with the content owned by the client.

I come from 3D, and from there I bring direct client work, iteration on feedback and delivery to deadline. On top of that is a software engineering foundation in C from 42 Barcelona, where I learned to work with memory, concurrency and peer-reviewed code.

I would be glad to tell you more in an interview and to answer any questions about my experience. Thank you for your time.

Best regards,

Francisco «Kiko» Rubio
